SUITE® TOUCH

SHAPES

EMOTION

A new approach to the homelift, designed to go beyond mere functionality and become a true part of your interior: clean lines with limitless possibilities.

Not just a homelift, but a design element that blends seamlessly into any space with elegance and uniqueness.

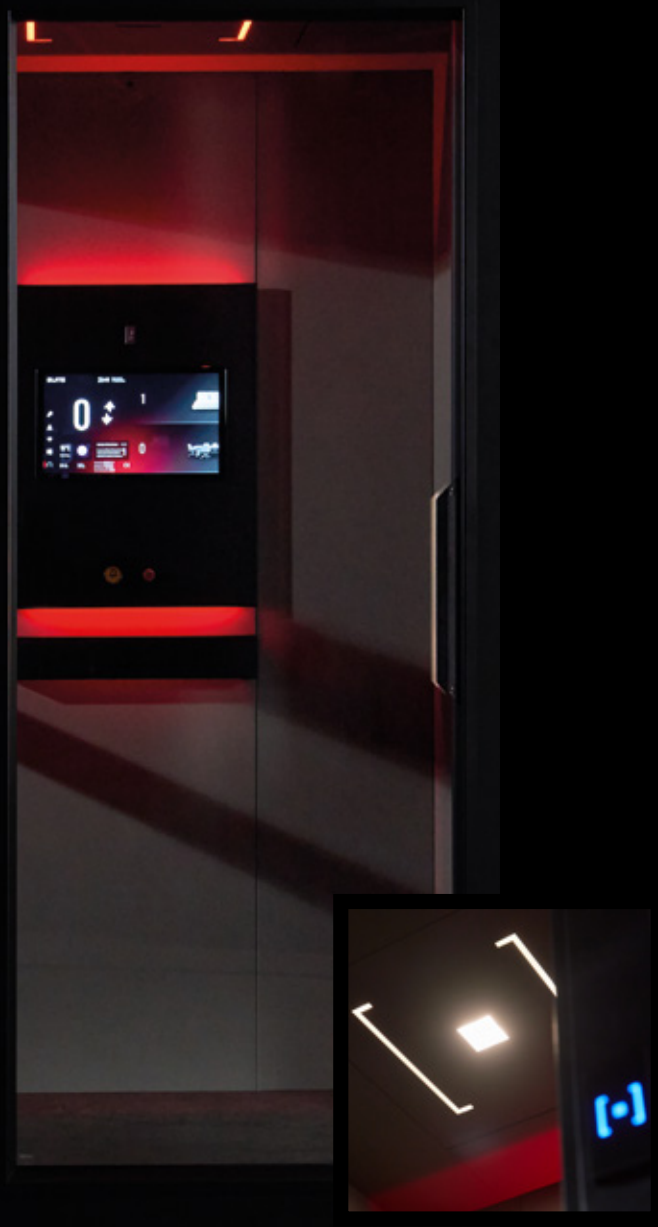

The car naturally fits its surroundings: neutral surfaces, refined details, and a full color palette interact with the space, expressing its essence

LIGHTING

Suite Touch brings light to the forefront, transforming it into an essential element that lives in harmony with the homelift. Customizable RGBW lighting accompanies the car's arrival on each floor, creating a distinctive and scenic effect.

SUITE® TOUCH

INNOVATION

CONNECTION

Elegant shapes and timeless aesthetics come together with a color customization system designed to fit any setting.

A homelift that welcomes you every day with a sleek, intuitive interface — comfort begins with a touch.

A simple, intuitive control experience, with all information and customization options right at your fingertips: a homelift tailored to your needs.

TOUCH SCREEN CONSOLE

The interactive console is the beating heart of the Touch series: the touch screen display allows you to select floors, adjust the car's RGBW lighting colors, and serves as a central hub for monitoring the homelift's status and performance.

Flexible, refined, and unique: a car that captures Italian elegance transcending the mere technical function.

VERTICAL DESIGN HANDRAIL

The handrail is a signature detail of the Touch series, echoing the essential lines of both console and light on the ceiling. For models with automatic operation, it is installed vertically near the console, contributing to the car's overall sense of balance and style.

A distinctive solution that elevates both the look and feel of the car, bridging sophisticated design with practical comfort.

SMART HORIZONTAL HANDRAIL

In models with hold-to-run operation, the handrail blends visual appeal with ergonomics and functionality - running horizontally and featuring touch sensors that activate platform movement while your hand remains in contact.

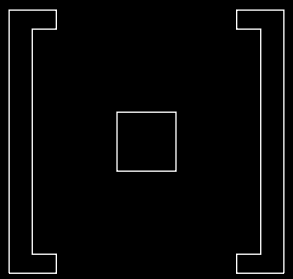

TOUCH SURFACES

On each floor, the backlit touch button activates the call with a simple gesture, providing an intuitive user experience.

Inside the car, the touch screen display puts complete control of the homelift at your fingertips, all through a single, effortless touch.

THE **NOVA**TION BEGINS

The square bracket is a precise and elegant symbol — a mark of clarity and limits.

Used in mathematics and algebra, it stands as a mark of order within numerical chaos — an element that protects values without excluding them.

Solid yet versatile, this small graphic sign sets space and structure, like a frame that doesn't just separate, but draws attention to what's inside.
